COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER LIBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25

CURRENT APPLICATION DATA;

APPLICATION NUMBER: US/07/744,282C

FILING DATE: August 13, 1991

CLASSIFICATION: 435

ATTORNEY/AGENT INFORMATION:

NAME: Kevin M. Farrell

REGISTRATION NUMBER: 35,505

REFERENCE/DOCKET NUMBER: 35,505

REFERENCE/DOCKET NUMBER: 35,505

REFERENCE/COCKET NUMBER: 35,505

TELEPAN: (207) 363-0528

INFORMATION FOR SEQ ID NO: 125:

SEQUENCE CHARACTERISTICS:

LENGTH: 15 base pairs

TYPE: nucleic acid

STRANBEDNESS: double

TYPE: NOCHCURY TYPE: DNA (GENOMIC)

STRANBENESS: double

TOPOLOGY: linear

MOLECULE TYPE: DNA (GENOMIC)
CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/07/744,282C

Sequence 1811, Application US/09038073

Patent No. 6194150

GENERAL INFORMATION:

APPLICANT: Stinchcomb, Daniel T.

APPLICANT: Jarvis, Thale

APPLICANT: MCSWIGGON, James

ITTLE OF INVENTION: METHOD AND REAGENT FOR THE

TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE

TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES

NUMBER OF SEQUENCES: 2751

CORRESPONDENCE ADDRESS:
                                                                                                                                                       CITY: Los Angeles
STATE: California
COUNTRY: U.S.A.
ZIP: 90071
COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5" Diskette, 1.44 Mb
MEDIUM TYPE: Storage

                                                                                                                                                                                                                                           Sequence 5, Application US/08461210;
Patent No. 6395475;
GENERAL INFORMATION:
APPLICANT: Leggett, Carol G.
TITLE OF INVENTION:
TITLE OF INVENTION: Semiautomated Method for Fingerprinting
TITLE OF INVENTION: Bacterial DNA
NUMBER OF SEQUENCES: 31
CORRESPONDENCES: 31
CORRESPONDENCE ADDRESS:
ADDRESSEE: Ruden, Barnett, McClosky, Smith, Schuster & ADDRESSEE: Russell
STREET: 200 East Broward Boulevard
CITY: Port Lauderdale
STATE: Florida
                                                                           ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2, Application US/09593323

Sequence 2, Application US/09593323

Patent No. 6265213

GENERAL INFORMATION:
APPLICANT: Severini, Alberto
TITLE OF INVENTION: Compositions and Methods for Determining the Activity
TITLE OF INVENTION: Of DNA-Binding Proteins and of Initiation of
TITLE OF INVENTION: Transcription
FILE REFERENCE: DNAB-02221
CURRENT APPLICATION NUMBER: US/09/593,323
CURRENT APPLICATION NUMBER: 09/344,300
FRIOR APPLICATION NUMBER: 09/344,300
FRIOR FILING DATE: 1999-06-24
NUMBER OF SEQ ID NOS: 72

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 2
LENGTH: 11
                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-09-593-373-3/C

Sequence 3, Application US/09593323
Patent No. 6265213
GENERAL INPORMATION:
APPLICANT: Morgan, Antony-R.
TITLE OF INVENTION: Compositions and Methods for Determining the Activity
TITLE OF INVENTION: Of DNA-Binding Proteins and of Initiation of
TITLE OF INVENTION: Transcription
FILE REFERENCE: DNAB-02921
CURRENT APPLICATION NUMBER: US/09/593,323
CURRENT FILING DATE: 2000-06-13
FRIOR PRICATION NUMBER: 09/344,300
PRIOR FILING DATE: 1999-06-24

USSOURCE 3, Application US/09594108

Patent No. 6284468

FAENERAL INFORMATION:

APPLICANT: Morgan, Antony R.

APPLICANT: Severini, Alberto

TITLE OF INVENTION: Of DNA-Binding Proteins and of Initiation of

TITLE OF INVENTION: Of DNA-Binding Proteins and of Initiation of

TITLE OF INVENTION: Of DNA-Binding Proteins and of Initiation of

TITLE OF INVENTION: Of DNA-Binding Proteins and of Initiation of

TITLE OF INVENTION: UNRER: US/09/594,108

CURRENT FILING DATE: 2000-06-13

FRIOR APPLICATION NUMBER: US/09/344,300

PRIOR FILING DATE: 1999-06-24

NUMBER OF SEQ ID NOS: 72

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 3

LENGTH: 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-594-108-2/c

                                                                                                                                                                                                                                                                                                                                              Sequence 147, Application US/08765340

Patent No. 6150092

GENERAL INFORMATION:

APPLICANT: UCHIDA, K.,

APPLICANT: TANAKA, Y.,

APPLICANT: KONDO, S.

TITLE OF INVENTION: AN ANTISENSE NUCLEIC ACID

TITLE OF INVENTION: COMPOUND

NUMBER OF SEQUENCES: 185

ADDRESSER: ANDRESS:

ADDRESSER: ANGRAN & FINNEGAN, L.L.P.

STREET: 345 PARK AVENUE

CITY: NEW YORK

STATE: NEW YORK

STATE: NEW YORK

STATE: NEW YORK

STATE: NEW YORK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDIUM TYPE: Floppy albak
COMPUTER: IBM PC compatible

Sequence 2, Application US/09458481B
Setent No. 631048
GENERAL INFORMATION:
APPLICANT: KUMAR, Vijaya B.
TITLE OF INVENTION: ANTISENSE MODULATION OF AMYLOID BETA PROTEIN EXPRESSION
TITLE OF INVENTION: AND SETENSE OF SEQUENCE TO CURRENT APPLICATION NUMBER: US/09/458,481B
CURRENT FILING DATE: 1999-12-09
NUMBER OF SEQ ID NOS: 20
SOFTWARE: PATENTIN Ver. 2.0
SEQ ID NO 2
LENGTH: 14 Gaps ; OTHER INFORMATION: Description of Artificial Sequence: Antisense; OTHER INFORMATION: Oligonucleotide US-09-458-481B-2 ö ; 0 MOLECULE TYPE: other nucleic acid DESCRIPTION: third strand derived from H. DESCRIPTION: influenzae 16s region in Seq ID No. 5861244317 Query Match
12.6%; Score 9.2; DB 1; Length 14;
Best Local Similarity 78.6%; Pred. No. 2e+02;
Matches 11; Conservative 0; Mismatches 3; Indels Query Match
12.6%; Score 9.2; DB 1; Length 14;
Best Local Similarity 78.6%; Pred. No. 2e+02;
Matches 11; Conservative 0; Mismatches 3; Indels HYPOTHETICAL: yes

ANTI-SENSE: no

STRANDEDNESS: single stranded
STRANDENNESS: single stranded
MOLECULE TYPE: other nucleic acid
DESCRIPTION: third strand derived from Hepatitis B
DESCRIPTION: isolate adr sequence region in Seq ID No. 5861244133
                        ;

Sequence 88 Application US/09231303

Patent No. 6395478

GENERAL INFORMATION:
APPLICANT: Nandabalan, Krishnan
APPLICANT: Nandabalan, Krishnan
TITLE OF INVENTION: IDENTIFICATION AND COMPARISON OF PROTEIN-
TITLE OF INVENTION: IDENTIFICATION OF INHIBITORS OF THESE INTERACTIONS
TITLE OF INVENTION: IDENTIFICATION OF INHIBITORS OF THESE INTERACTIONS
TITLE OF INVENTION: UMBER: US/09/231,303
CURRENT APPLICATION NUMBER: US/09/231,303
CURRENT APPLICATION NUMBER: 08/663,824
EARLIER PILING DATE: 1996-06-14
NUMBER OF SEQ ID NOS: 118
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 88
LENGTH: 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 244

i Saturner 89, Application US/08663824

i SATURNER INFORMATION:

APPLICANT: Nandabalan, Krishnan

APPLICANT: Rothberg, Jonathan

ITILE OF INVENTION: IDENTIFICATION AND COMPARISON OF PROTEIN-PROTEIN

ITILE OF INVENTION: IDENTIFICATION THAT OCCUR IN POPULATIONS

ITILE OF INVENTION: 1108

CURRENT FILING DATE: 1996 06-14

NUMBER OF SEQ ID NOS: 118

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 88

LENGTH: 12

TYPE: DNA

ORGANISM: Artificial Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2. Application US/07958133
Patent No. 5403709
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Agrawal, Sudhir
APPLICANT: Tang, Jin-Yan
TITLE OF INVENTION: Oligonuclectides Containing No. 5403709-Phosphodiester
TITLE OF INVENTION: Internuclectide Linkages
NUMBER OF SEQUENCES: SCORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô

INFORMATION FOR SEQ ID NO: 187:
SEQUENCE CHARACTERISTICS:
LENGTH: 12 base pairs
TYPE: nucleic acid
STRANDEDNESS: double stranded
TOPOLOGY: linear
MOLECULE TYPE: genomic DNA
DESCRIPTION: hepatitis B virus adw2 isolate,
DESCRIPTION: nucleotides 1833 to 1844
HYPOTHETICAL: no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                              TOPOLOGY: linear Stranded
TOPOLOGY: linear Persistence of the Molecule TYPE: genomic DNA
DESCRIPTION: 23s rRNA gene from Halococcus morrhuae
DESCRIPTION: (Accession # X05481) nucleotides 880 to 891
HYPOTHETICAL: no
ANTI-SENSE: no
ORAGINEM: HALOCOCCUS morrhuae
ORAGINEM: HALOCOCCUS morrhuae
PUBLICATION INFORMATION: Kjems, J, Ostergaard, L, AUTHORS: Leffers, H, Kjems, J, Ostergaard, L, AUTHORS: Leffers, H, Kjems, J, Ostergaard, L, TILLE: Evolutionary Relationship

DESCRIPTION: 23s rRNA gene from Micrococcus luteus
DESCRIPTION: (Accession # X06484) nucleotides 859 to 870
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 261
US-08-173-489C-259/C

Sequence 259, Application US/08173489C

Patent No. 5861244

SEQUENCE CHARACTERISTICS:
LENGTH: 12 base pairs
LENGTH: 12 base pairs
TYPE: nucleic acid
STRANDEDNESS: double stranded
TOPOLOGY: linear
MOLECULE TYPE: genomic DNA
DESCRIPTION: 23s FRNA gene from Rhodobacter
DESCRIPTION: capsulatus (Accession # X06485) nucleotides 842
HYPOTHETICAL: no
ANTI-SENSE: no
ANTI-SENSE: no
ORIGINAL SOURCE:
ORGANISM: Rhodobacter capsulatus
STRAIN: AGM 348
PUBLICATION INPORMATION:
AUTHORS: Regensburger, A, Ludwig, W, Frank, R,
AUTHORS: Bloecker, H, Schlaifer, K H.
TITLE: Complete nucleotide sequence
TITLE: of a 235 ribosomal RNA gene from Rhodobacter
TITLE: Of a 235 ribosomal RNA gene from COURMAL: NUCLUME: 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .
